US-10-239-090A-55

US-10-239-090A-55

Sequence 55, Application US/10239090A

Publication No. US20040101820A1

GENERAL INFORMATION:

APPLICANT: KABUSHIX KAISHA TOSHIBA

TITLE OF INVENTION: Polynucleotide probe and primer derived from hepatitis E virus oc

TITLE OF INVENTION: detecting hepatitis B virus using the same,

TITLE OF INVENTION: detecting hepatitis B virus using the same

TITLE OF INVENTION: detecting hepatitis B virus using the same

TITLE OF INVENTION NUMBER: US/10/239,090A

CURRENT APPLICATION NUMBER: US/10/239,090A

CURRENT FILING DATE: 2001-06-25

NUMBER OF SEQ ID NOS: 57

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                1 AIGCGCCCTCGGCCTAITIT......GIAAAACTCGGGAGTIGIAG 1983

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                       Immunogenic hepatitis E virus (HEV) peptides are selected from the ORF1, ORF2 and ORF3 regions of HEV. The peptides can be used in vaccines to prevent infection by HEV. The antibodies can neutralise and block HEV infection and can be used to prevent or treat HEV infection. The peptides and antibodies can also be used as diagnostic reagents. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 24-OCT-2003 to standardise OS field)
